

Installation manual

KTM 790/890 ADV/HUSQVARNA NORDEN 901

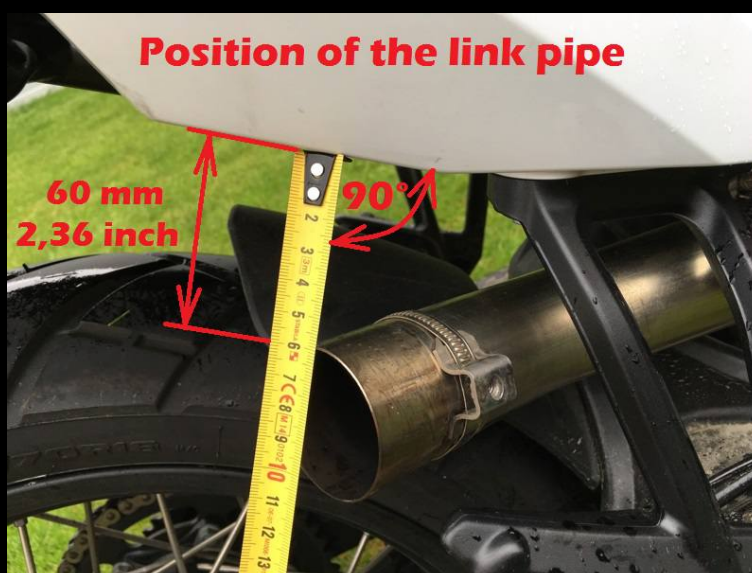

Thank you for choosing WINGS exhaust.

Before you start replacing the exhaust, please read the General Installation Instructions first. This Instruction manual is intended for both **KTM 790/890 ADV** and **HUSQVARNA NORDEN 901**.

To change the exhaust you must first remove the original one. You must also remove the original heat shield.

MOUNTING THE EXHAUST Once you have successfully removed the original exhaust, position the included WINGS link pipe, as shown on the picture below. Use the original V-shape clamp to secure the link pipe.

Now comes the time to mount the exhaust. The bracket comes into the same position as the one from the original one. Carefully slide the exhaust onto the link pipe. If it does not fit, try re-positioning the link pipe. The hole on the bracket of the muffler must line up with the hole on the bracket of the bike.

When the exhaust is in position you can insert the included bolt and fasten it with a tightening torque as shown on the picture below. Also fasten the bolt on the clamp on the exhaust and the V-shape clamp on the link pipe.

MOUNTING THE HEAT SHIELD Before mounting the heat shield make sure the bolts are not screwed in completely (see the picture on the right). The bolts should NOT be protruding the insulating washers on the inside of the heat shield for more than 4 mm, otherwise mounting the heat shield will not be possible.

Position the heat shield in a way that all of the bolts are aligned with the holes. **DO NOT TIGHTEN** the bolts all the way. Tighten them just a bit (a few turns). Once you have screwed all of the bolts in a bit you can go ahead and tighten them fully with a tightening torque of **5 Nm/3,7 lb ft**. Do not forget to fasten the clamp holding the heat shield. For the heel guard use a tightening torque of **4 Nm/2,95 lb ft**.

Once you have tightened all of the bolts, check again to make sure that they are correctly tightened. Check the tightness of the bolts periodically.

We wish you a lot of fun with our exhaust and always a good ride!
